

# *Microdermabrasion*

Microdermabrasion is an exfoliation treatment that uses diamond tipped rods to gently help the skin eliminate dead cells and promote cell regeneration and collagen creation.

As a result, it helps to improve the appearance of dark spots, helps pores to appear smaller and gives the skin an overall healthier appearance. It also helps prevent acne caused by pore obstruction. A series of treatments can help improve skin texture, blackheads, scars and melasma (i.e. pigment changes).

A wonderful alternative or compliment to chemical peels, the DiamondTone™ skin resurfacing *microdermabrasion* treatment is non-invasive, pain-free and requires no down time after treatment.
